

# Visual Analysis and Querying of Large Knowledge Graphs

Thorsten Liebig | [liebig@derivo.de](mailto:liebig@derivo.de)

**derivo**

# derivo

- ▶ SME, est. 2010
- ▶ Background KR & reasoning
- ▶ Consulting and development of semantic software tools & solutions
- ▶ Products:
  - Browsing:
    - SemSpect
    - MetaExplorer
- ▶ Community projects:  
neo2rdf, mongo2neo4j, Konclude

# Classical Network Rendering?

- + good for small graphs
- + data-driven
- does not scale
- poor expansion control
- disorientation due to node rearrangement
- no reasonable overview

# How to get Meaningful Graph Insights?

Panama Papers:

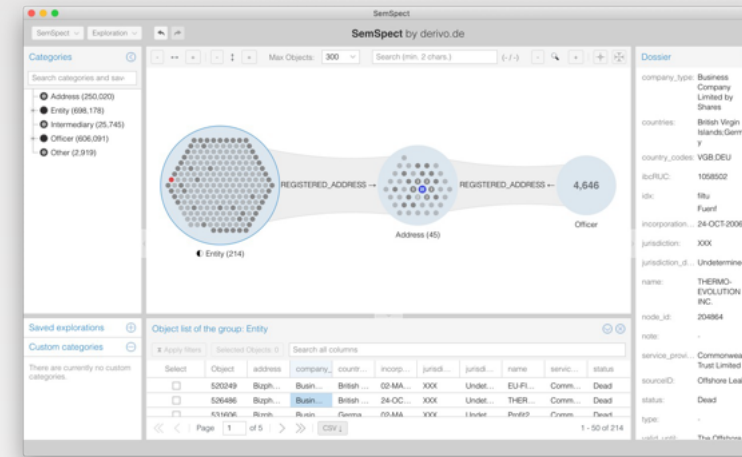

→ ICIJ (<https://www.icij.org>)

“The **officers** that share an **address** with an **entity** in Germany”

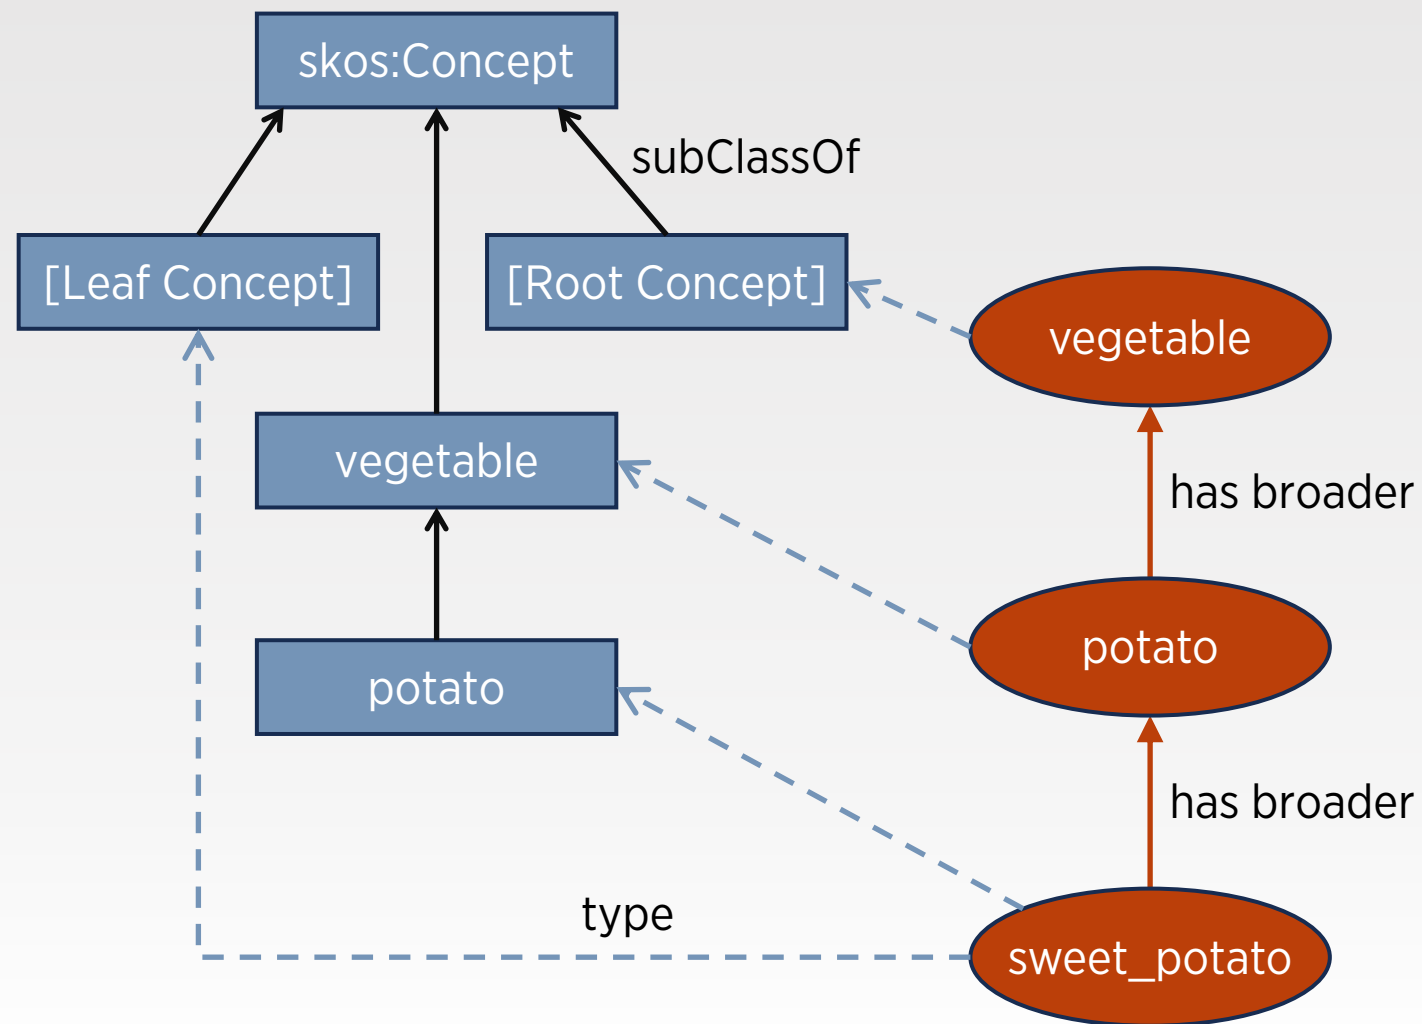

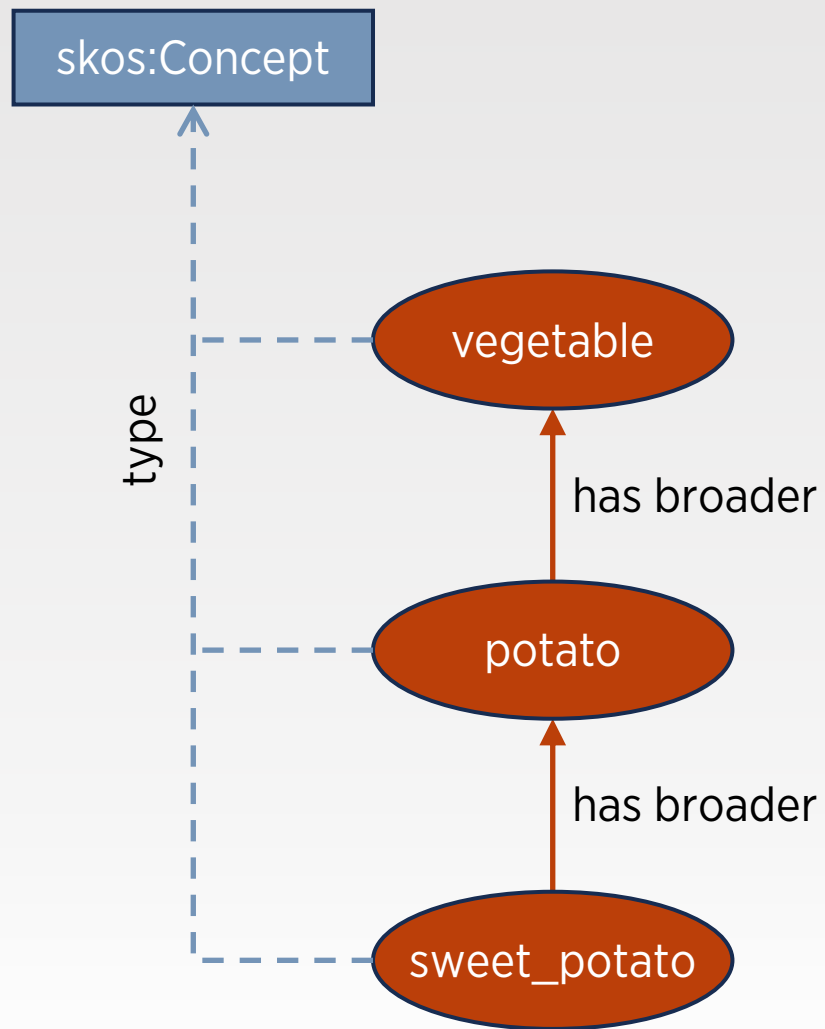

# Exploration Beyond the Hairball

- ▶ node grouping
- ▶ relation aggregation
- ▶ guided exploration
- ▶ on-demand details
- ▶ node/relation filtering
- ▶ free/pro/enterprise license

<http://www.semspect.de/>

# SKOS Mode

# Wrap up

- ▶ investigate not only the structure but also the proportions
- ▶ find data flaws, data outliers or missing connections
- ▶ build complex queries just by visual exploration
- ▶ refine the graph schema while browsing

SemSpect for

- Neo4j: Graph App & server plugin
- RDF/OWL/SKOS/SHACL: server with own data store
